

Recycling Hazardous Household Goods

(Mercury)

The City of Buffalo is committed to providing clean water and a healthy environment for our community. Mercury is a toxic element found in fluorescent lights, thermometers, and switches that can end up in our landfills and wastewater reclamation facility.

Residents are encouraged to know what to do in the event of a mercury spill, replace mercury containing equipment, and properly dispose of mercury-based equipment and unused chemicals to the Wright County Compost and Recycling Facility. By following these steps, you are helping protect public health, improve water quality, and potentially reduce future costs for our wastewater reclamation system.
